

KEMA ZN-595 ZINKSPRAY

Galvanizing Repair coating

Properties:

- Quick drying long term protection for metal surfaces
- Supplement for hot galvanization
- More than 95% pure zinc in the coating
- Long lasting corrosion
- Protection after DIN 50021 and 53167
- Salt spray test: > 540 hours
- Maximum service temp. +500 °C

Same properties as hot galvanizing. Protects against corrosion on all clean metal surfaces - even without after treatment. The surface becomes strong and suitable for painting. Use for surface care of galvanized parts, for the repair of scratches on galvanized surfaces. For cavity sealing, under sealing and protection. The product is suitable for use in sound insulations equipment, exhaust and ventilation equipment, pipe bendings, heat exchangers, oil coolers and other types of equipment that are exposed to thermic changes as well as fittings on steel constructions, drill holes and welds in connection with grating and steel constructions.
